

Expanded Table of Contents

Foreword	xv
Preface	xvii
Reviewers	xix
The Authors	xxi
1 Common Mechanisms in Biological Chemistry	1
1.1 Functional Groups in Biological Chemistry	3
1.2 Acids and Bases; Electrophiles and Nucleophiles	6
Brønsted–Lowry Acids and Bases	6
Lewis Acids and Bases	10
Electrophiles and Nucleophiles	11
1.3 Mechanisms: Electrophilic Addition Reactions	12
1.4 Mechanisms: Nucleophilic Substitution Reactions	14
1.5 Mechanisms: Nucleophilic Carbonyl Addition Reactions	17
Nucleophilic Addition Reactions	18
Alcohol Formation	20
Imine (Schiff Base) Formation	20
Acetal Formation	22
Conjugate (1,4) Nucleophilic Additions	24
1.6 Mechanisms: Nucleophilic Acyl Substitution Reactions	26
1.7 Mechanisms: Carbonyl Condensation Reactions	28
1.8 Mechanisms: Elimination Reactions	32
1.9 Oxidations and Reductions	34
Problems	37
2 Biomolecules	43
2.1 Chirality and Biological Chemistry	44
Enantiomers	45
Diastereomers, Epimers, and Meso Compounds	47
Prochirality	50
2.2 Biomolecules: Lipids	52
Triacylglycerols	52
Other Lipids: Terpenoids, Steroids, and Prostaglandins	54

2.3	Biomolecules: Carbohydrates	56
	Carbohydrate Stereochemistry	57
	Monosaccharide Anomers	58
	Disaccharides and Polysaccharides	61
	Deoxy Sugars and Amino Sugars	62
2.4	Biomolecules: Amino Acids, Peptides, and Proteins	63
	Amino Acids	64
	Peptides and Proteins	68
2.5	Biomolecules: Nucleic Acids	72
	DNA: Deoxyribonucleic Acid	75
	RNA: Ribonucleic Acid	76
2.6	Biomolecules: Enzymes, Coenzymes, and Coupled Reactions	77
	Enzymes	77
	Coenzymes	80
	Coupled Reactions and High-Energy Compounds	83
	Problems	86
3	Lipid Metabolism	93
3.1	Digestion and Transport of Triacylglycerols	94
	Triacylglycerol Hydrolysis	95
	<i>A Brief Note about Visualizing Enzyme Structures</i>	97
	Triacylglycerol Resynthesis	99
3.2	Triacylglycerol Catabolism: The Fate of Glycerol	102
3.3	Triacylglycerol Catabolism: Fatty-Acid Oxidation	106
3.4	Fatty-Acid Biosynthesis	115
3.5	Terpenoid Biosynthesis	125
	The Mevalonate Pathway to Isopentenyl Diphosphate	126
	The Deoxyxylulose Phosphate Pathway to Isopentenyl Diphosphate	132
	Conversion of Isopentenyl Diphosphate to Terpenoids	139
3.6	Steroid Biosynthesis	144
	Conversion of Farnesyl Diphosphate to Squalene	144
	Conversion of Squalene to Lanosterol	148
	References	153
	Problems	156

- 4 Carbohydrate Metabolism 161**
 - 4.1 Digestion and Hydrolysis of Complex Carbohydrates 162
 - 4.2 Glucose Catabolism: Glycolysis 164
 - 4.3 Transformations of Pyruvate 178
 - Conversion of Pyruvate to Lactate 179
 - Conversion of Pyruvate to Ethanol 179
 - Conversion of Pyruvate to Acetyl CoA 181
 - 4.4 The Citric Acid Cycle 185
 - 4.5 Glucose Biosynthesis: Gluconeogenesis 193
 - 4.6 The Pentose Phosphate Pathway 203
 - 4.7 Photosynthesis: The Reductive Pentose Phosphate (Calvin) Cycle 211
 - References 216
 - Problems 218

- 5 Amino Acid Metabolism 221**
 - 5.1 Deamination of Amino Acids 223
 - Transamination of Amino Acids 223
 - Oxidative Deamination of Glutamate 227
 - 5.2 The Urea Cycle 228
 - 5.3 Catabolism of Amino Acid Carbon Chains 232
 - Alanine, Serine, Glycine, Cysteine, Threonine, and Tryptophan 234
 - A Brief Note about Oxidation States in Iron Complexes* 241
 - A Brief Note about PLP Reactions* 251
 - Asparagine and Aspartate 252
 - Glutamine, Glutamate, Arginine, Histidine, and Proline 252
 - Valine, Isoleucine, and Leucine 255
 - Methionine 259
 - Lysine 264
 - Phenylalanine and Tyrosine 265
 - 5.4 Biosynthesis of Nonessential Amino Acids 271
 - Alanine, Aspartate, Glutamate, Asparagine, Glutamine, Arginine, and Proline 273
 - Serine, Cysteine, and Glycine 274

- 5.5 Biosynthesis of Essential Amino Acids 276
 - Lysine, Methionine, and Threonine 276
 - Isoleucine, Valine, and Leucine 284
 - Tryptophan, Phenylalanine, and Tyrosine 286
 - Histidine 295
- References 297
- Problems 301
- 6 Nucleotide Metabolism 305**
 - 6.1 Nucleotide Catabolism 307
 - Pyrimidines: Cytidine, Uridine, and Thymidine 307
 - Purines: Adenosine and Guanosine 311
 - 6.2 Biosynthesis of Pyrimidine Ribonucleotides 313
 - Uridine Monophosphate 313
 - Cytidine Triphosphate 318
 - 6.3 Biosynthesis of Purine Ribonucleotides 319
 - Inosine Monophosphate 319
 - Adenosine Monophosphate and Guanosine Monophosphate 325
 - 6.4 Biosynthesis of Deoxyribonucleotides 327
 - Deoxyadenosine, Deoxyguanosine, Deoxycytidine, and Deoxyuridine Diphosphates 327
 - Thymidine Monophosphate 329
- References 332
- Problems 334
- 7 Biosynthesis of Some Natural Products 339**
 - 7.1 Biosynthesis of Penicillins and Cephalosporins 342
 - Penicillins 344
 - Cephalosporins 349
 - 7.2 Biosynthesis of Morphine 352
 - 7.3 Biosynthesis of Prostaglandins and Other Eicosanoids 363
 - 7.4 Biosynthesis of Erythromycin 369

7.5 Biosynthesis of Coenzyme B ₁₂ and Other Tetrapyrroles	379
Uro'gen III	380
Heme	384
Coenzyme B ₁₂	387
References	400
Problems	403
8 A Summary of Biological Transformations	409
Hydrolyses, Esterifications, Thioesterifications, and Amidations	409
Carbonyl Condensations	411
Carboxylations and Decarboxylations	413
Aminations and Deaminations	416
1-Carbon Transfers	417
Rearrangements	419
Isomerizations and Epimerizations	420
Oxidations and Reductions of Carbonyl Compounds	421
Hydroxylations and Other Oxidations via Metal Complexes	424
Appendixes	429
A. Visualizing Protein Structures Using the Swiss PDB Viewer	429
B. Using the KEGG and BRENDA Databases	436
C. Answers to End-of-Chapter Problems	441
D. Abbreviations Used in This Book	474
Index	477
